Who we are

AcceGen is a US leading biotechnological company. Founded in 2016, located in Fairfield, New Jersey, AcceGen provides complete and authentic cell products and services.

We proudly develop innovative technologies for the cell biology, pharmaceutical, biotechnology, and specialty ingredients markets. We are committed to supplying the best products and services with global manufacturing, development expertise, and advanced technologies to enhance the overall quality of life.

AcceGen developed significant expertise in cell and genomic research. We provide a variety of high-quality Primary Cells, Tumor Cell Lines, MicroRNA Agomir/Antagomir, Stem Cells, Immortalized Cell Lines, Transfected Stable Cell Lines, and Nucleic Acid Kits.

Mission

AcceGen proudly develops innovative technologies for the cell biology, pharmaceutical, biotech, and specialty ingredients markets. We are committed to supplying the best products and services with global manufacturing, development expertise, and advanced technologies to enhance the overall quality of life. We take care of our customers and their global, regional, or local requirements.

Vision

Our vision is to be a trusted leader of biotechnology companies to expand industry prospects for the benefit of mankind.

Strengths

Strong product portfolio: We provides products in a large range of categories and there are a number of unique product offerings that are not provided by competitors.

Quality control: Our products have maintained quality over the years and are still valued by customers.

Expert team: We ensure a scientific, normative, and standardization laboratory work process for each order.

High Quality Service: We are here to help you, anytime and every day.

Global distributor: We have a strong distribution network that makes sure that its products are available easily to a large number of customers globally in a timely manner.

Product Portfolio

Primary Cells

– Human Primary Cells

– Animal Primary Cells

Tumor Cell Lines

– Human Tumor Cell Lines

– Animal Tumor Cell Lines

MicroRNA Agomir/Antagomir

– Human miRNA Agomir/Antagomir

– Mouse miRNA Agomir/Antagomir

– Rat miRNA Agomir/Antagomir

Stem Cells

– Embryonic Stem (ES) Cells

– Adult Stem Cells

– Cancer Stem Cells

– Mesenchymal Stem Cells (MSC)

– Induced Pluripotent Stem Cells

Immortalized Cell Lines

– Immortalized Cell Lines

Nucleic Acid Kits

– Nucleic Acid Kits

Transfected Stable Cell Lines

– Knockout Stable Cell Lines

– Knockin Stable Cell Lines

– Knockdown Stable Cell Lines

– Overexpression Stable Cell Lines

– Reporter Cell Lines

– Knockout Cell Lysate
